# Point-7 2k14

Based on the excellent feedback received over the year from you our clients and end users of Point-7 products, a whole range of development and improvements has been implemented in the 2014 line-up. New sail range, more development on the existing ranges, newly developed accessories, new extensions and new booms.

Jumping back to the effort made in 2013, then we created the first read team within Windsurfing.

## The Black Team

Through dedication and commitment a group of independent athletes came together to work and train in unison with one common goal, to wind and push each other forward to gain better results as a group. The Black Team is now working as a great marketing tool for the Point-7 brand, and partaking in the continued development of the products and brand.

SAILRANGE

'A torrent of development has paved the way forward on the 2014 sail ranges from Point-7'.

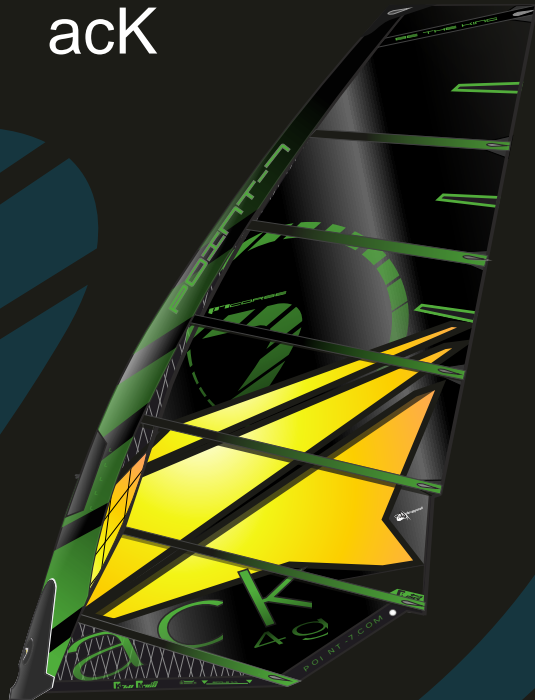

The **FLATWATER** ranges have received more Power Juice from the latest **AC-1** development, transferring all our racing experience directly into the **AC-K**, **AC-X** and **HF**. Special for the AC-X is the introduction of a new back cut outline that allows for the wind to faster exit the sail, adding acceleration and lightness of the rig in high-wind conditions.

K14

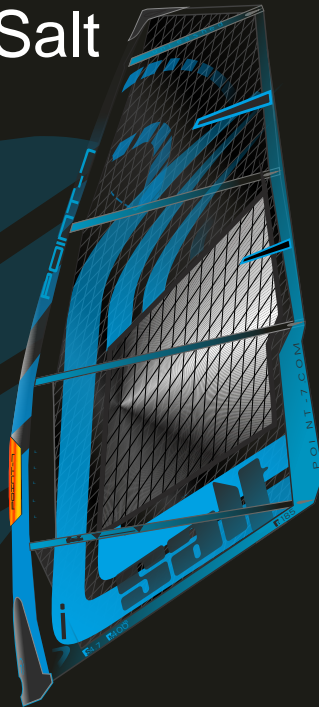

Adam Lewis has been keeping busy throughout the year with Sail Designer Claudio Badiali, working on the lines but also to streamline the ranges. As a result the **SADO** will no longer be offered in sizes below 4.0 as with the introduction of the **SWAG** in 2013 proved these sizes to be in excess as the characteristics of the 2 sail ranges are extremely similar in the small sizes. The **SALT** will continue in its current size table. Further 2014 will see the introduction of a totally new freestyle sail developed with Nicolas Akgazciyan in the sizes 4.4 – 4.8 and 5.2

New carbon booms, sizes kept simple!  
**Sc100: 2 slalom sizes 170 | 190 +60cm**  
**Wc100: 2 wave sizes 150 | 150 +60cm**

The new P7 boom ranges being introduced is the fruit of extensive testing on curves, grip diameters and rigidity. The booms ensures an equal load distribution to both of the riders arms and both feet, giving an extremely comfortable stance that will allow its user to sail for longer with less fatigue- making it easier to push harder!

The booms will further introduce a new length adjustment system, replacing the known push pin system. The new system is currently in its final stages of development and as soon as the testing is completed we will release more news on this. The tube diameter is 28mm.

The 2 wave boom sizes have been developed with 25mm octagon shaped tubes, resulting in superior rigidity compared to normal circular tubes, as well as being comfortable to the grip. The back end pulley system on all carbon booms, is integrated in the carbon moulding.

Both Carbon and the Aluminium booms will feature a new carbon fibre boom head which sits firmly on the mast with less pressure applied to the mast. Minimizing breakages, boosting stiffness.

ACCESORIES

Upgraded

## vario harness lines,

which have been modified from the old version to reduce the swinging motion of the lines to a absolute minimum easing hooking in. Further the vario lines feature a new cleat and release handle.

## New adjustable outhauls

made with spectra rope offers less stretch and more control when tuning using a new cleat that allows for tuning to the millimetre when on the go.

# BLACK TEAM

The 2013 season has only just started and the black team is already proving to be a force to be reckoned with. We have to grow the momentum and ensure national teams will follow in size and results. During the 2014 winter season, an extended training program will be made available for everyone to join in Tenerife together with the Black Team.
