NAH SKWEL

Dear All,

Hereunder you will find the most extensive and refined Nah-Skwell collection to date.

Beyond the usual superlative words that your knowledge of Nah-Skwell shapes do not require any more, we wish to stress the quality of our production.

Produced in one-shot-sandwich (OSS) construction, in a very modern factory, with woods from managed forests and limited VOC-content paints, Nah-Skwell boards are very precisely reproduced and super-light, yet durable.

Shaping boards all year long, in house, that you know we do! But ... what happens next?

The final refined and approved prototype is then digitalized and curves smoothed for production. Insert positions are carefully set.

In twenty minutes, a CAM 5axis, multiple tools, milling machine shapes the blank, and cuts-out boxes and inserts positions.

Workers lay-up cloth and resin over the foam-core. The wood sandwich-material and wood reinforcements, and again cloth and resin, including carefully laid stiffening strips are laid in the mould in reverse order.

The mould is closed over the board, fully wrapped in cloth, sandwich-material and resin. The board will now cure at 50° for 1 hour under 3 tons pressure

Cured boards are then lightly sanded and prepped for finishing

Decorative paints are sprayed on the board. Our factory, to the difference of others, exclusively uses low- VOC-content paints.

Transfer stickers are carefully applied before the completed board goes into the spray-booth, again, for a final clear-coat varnish.

Foot-pads, cut and assembled on site to our graphic-designers specs, are then glued-on, under vacuum. The board now goes through a thorough final quality-check

NAHSK WELL EVOLUTION

3 RANGES

• KOOL SERIES

Sup for any one

Stability, Glide, Cool Surfing

• GET UP SERIES

Waves may become your playground

Versatility, Sensations, Evolution

• FIT 11'

The key to unique cruising grounds

Exercise, Fun, Easiness

KOOL SERIES

Unique boards to test learn and enjoy StandUpPaddling.
Stable and easy in any environment.

Just touring your neighbouring waters.
Enjoying surrounds, underwater life and flora, while standing-up, safely balanced.

A playful wave-toy.
Glide on the swell or smaller waves; move on them, just surf.

Fully sailing-convertible.
Back to light-wind sail-boarding

The elegance of a wood-reveal board

KOOL SHAPE

Short-length vee at the nose to free water-entry and prevent any tripping in turns; progressive and light double-concave to enhance softness of glide and stability, ending in a short vee at tail to allow better carving.

KOOL SPECS

NEW

GET-UP SERIES

Surfing is a play!
Get-up 2013 a truly sensational range
For any wave!

Sensations:

In these small rollers that nobody else has spotted

Sensations:

On the mighty series everybody is fighting for

Superb manoeuvres.

Fast and explosive! Gone at the first move!

7'10 and 8'10

9'6 for the larger guys or to learn and progress.

GETUP SHAPE

From 3 years of experience, 3 entirely new designs:
 A single and progressive concave along the full board guarantees stability when paddling and a nervous take-off, while flattening the scoop in the middle has allowed boosting the accelerations

GETUP SPECS

			
Specs	GetUP 7'10"	GetUP 8'10"	GetUP 9'6"

THE FIT 11'

Designed for YOUR pleasure.
A floating gym c/w exploration craft,
but one which doesn't fear waves!

Feel your body:

Standing up in balance, every movement shall be smooth and fluid, activating many muscle chains, in particular lateral ones and abdominal oblique muscles (yes! those which make your stomach slimmer ...), without any risk of trauma.

Discover your environment:

Be first to tour marshes, rivers, secluded coves, that nobody has ever plied while standing-up

Enjoy gliding the swell and small waves.

Thanks to its refined under-body, the FIT 11' glides and accelerates effortlessly on the swell. It surfs the slightest bump and is very easily manoeuvred on small waves.

FIT 11' SHAPE

True ship-bow + double concave associated to a long and progressive vee. The double concave “frees” the bow and directs water-flow.

The scoop-line is kicked-up in the one-foot-off both to ease the water-flow exit at the tail and sharpen man oeuvres.

Rails are significantly rounded forward to enhance glide, whatever the sea-conditions

The ultimate 12'6

Innovation, Efficiency, Speed, Stability

NEW

2013 SURF SERIES

No-limit wave-sailing

Performance and carving

True Surf boards in the Stand-Up-Paddle world!

Keep standing-up at the line-up, even in strong conditions

Thanks to an harmonious volume spread

Fast in deep-waves.

Stable in the chop.

Nervous and reactive in radical moves

2013 SURF SHAPE

Very thin rails guarantee greater stability and excellent maneuverability in deeper wave-sections.

A straightened scoop-line, still well rockered up-front, gives them the requested speed at the take-off and in the surf, when the rider needs to rule over the waters.

Set with MT Thrusters and US Box Centre Fin, and boosted through a single concave along the whole length, the new 2013 Surf series are both responsive and fast!

SURF SPECS

RACE 12'6 "W"

Sport!

A true competition and touring board

Paddle fast and long distance!

A true ship-bow guarantees a soft-glide all along.

A decent (73cm) width enhances stability for the rider to use his full power and keep balance in the chop.

A clean deck unencumbered by any fussy adds-on allows the rider to move freely and catch any bump for a speedy surf

A race-board, yes, but one which covers distances efficiently opening new touring-grounds to fit riders, as well.

RACE 12'6 "W" SHAPE

True ship-bow + double concave associated to a long and progressive vee.
 The double concave "frees" the bow and directs water-flow.
 Rails are significantly rounded forward to enhance glide, whatever the sea-conditions
 An add-on concave at the tail speeds-up the tail-flow

RACE 12'6 "W" SPECS

<u>Specs</u>	<u>Brazil</u>	<u>12'6 W</u>	<u>Tricolore</u>

<u>Width</u>		73cm / 28" 3/4	
<u>Thick.</u>		15cm / 5" 9/10	
<u>Volume</u>		240 l	
<u>Weight</u>		13kg	
<u>Fin</u>		Single Powerbox Race	
			
<u>MastFoot</u>		None	

SCOW

Revolutionary?

Smooth, fast, incredibly stable and yet so responsive in the turn!

Flat-water: faster top-speed and outstanding accelerations.

Downwind: great surfs without any yaws, start earlier, surfs longer

A straighter scoop-line is the key to higher speeds.

The “boxed” outline and resulting increased directional stability allow the rider to “change side” less often and be more efficient.

The well spread-out volume gives a much greater stability in anything from a 25° to 180° chop and makes beam-seas so much more comfortable

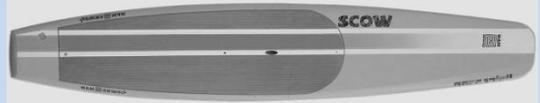

SCOW SHAPE

Hull bottom: convex forward followed by a vee to be straightened aft.
Rails: soft and tucked-under forward, to be progressively squared towards the tail.

SCOW SPECS

Specs	Regular	Scow

NAH-SKWELL SPIRIT

- **LONGBOARD SERIES**

High performance surfing

Soul, Purity, Style

NEW

LONGBOARD SERIES

At a time when short-boards radicalize SUP surfing and contests, Nah-Skwell dares to innovate in inviting you to ride in the wake of the ancestral spirit and purity of the surf culture

A board gifted with a perfect glide, allowing early take-off and immediate speed on any wave-size.

Stuck on the nose of the board, you shall discover and enjoy unique sensations, suspended over the wave-through

In a deep and larger wave, the Longboard series thin and pinched tail shall allow you going fast and/or turning abruptly and very shortly: you'll never find yourself dominated by your board.

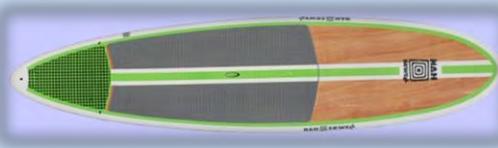

LONGBOARD SHAPE

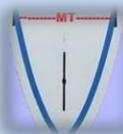

Two short vees, shaped in both the forward and aft one-foot section, bring that little extra manoeuvrability, which allows short turns when needed. Associated to quite thin rails, a progressive double-concave guarantees stability and speed when gliding or within curves.

The « Thrusters » fin configuration is set with side-fins widely apart to greatly enhance grip and manoeuvrability in the surf

LONGBOARD SPECS

Specs	Longboard 10'		Longboard 11'
Length	305cm / 10'		335cm / 11'

NAHSKWELL

SCHOOL PROGRAM

- **NAHSKOOL SERIES**

Stability and glide

Comfortable, rugged and durable

NAH-SKOOL SERIES

Because it is possible to learn on swift and nimble boards, providing they are friendly enough to the pupils and comfortable.

Deck and rail fully covered in soft EVA, for less harm when climbing back on and/or knee-paddling. Comfortable and durable!

Early paddle-strokes hitting the rails more often than pushing water? No problem there is a full length thick EVA rail-protection!

A delicate balance between glide and stability factors allows an early enjoyment of the sport.

NAH-SKOOL SHAPE

This is the Kool Shape!

Short-length vee at the nose to free water-entry and prevent any tripping in turns; progressive and light double-concave to enhance softness of glide and stability, ending in a short vee at tail to allow better carving.

TO BE CONTINUED

FROM 2012

1 RANGE

The fast evolution of the upper end of the sport has led Nah-Skwell and competitors alike to move towards thinner and shorter waveboards.

Those will not prove as friendly as the previous ones to intermediate Supers.

Following a number of discussions, we have decided to maintain the capacity of distributors to place orders for new 2012 design surf-series boards.

SURF SERIES

*No compromise boards, those are true surfing machines designed for those riders who are looking for innovative shapes and that extra performance.

Model	Width	Thickness	Volume	Weight
8'3" (248cm)	29" 1/2 (75cm)	4" 1/2 (11.3cm)	122L	8.5
9'1" (277cm)	30" (76cm)	4" 1/2 (11.4cm)	133L	9
9'7" (292cm)	30" 1/4 (77cm)	4" 1/2 (11.5cm)	149L	9.5

TO BE CONTINUED IN 2013

SURF 8'8":

A « no-compromise » board, this is a true surfing machine designed for those riders who are looking for the latest innovative shapes and that extra performance. Rather short, with a rockered scoop line and very thin rails, it brings a, yet unknown, radical aspect into Stand Up Paddle wave practice and offer fast, sharp and aggressive surfing. Ideally suited to 50cm (1 1/2 ft) to 2m50 (8ft) waves

Length	Width	Thickness	Volume	Weight
8'8" (264cm)	29"1/2 (75cm)	4"1/2 (11.2cm)	122lt	8.5
Fin :	Thruster		3 x T12.8	

Shape specifics:

- **Outline:** compact and quite rounded for maximal maneuverability, but straightened on the nose and tail to get over the break and be more aggressive in the surfs.
- **Swallow tail:** this brings extra-maneuverability and volume under the rider's aft foot and allows thinner rails.
- **Rails:** thin, low volume, tucked under forward and rather sharp next to the tail: maneuverability, sharp surfs.
- **Scoop:** curved, to fit in the wave through and bring further safety in critical sections.
- **Bottom:** Veed, with a double concave, on the whole length, to straighten the scoop-line and bring more speed

SURF 9'3":

With a different volume repartition from the 8'8, this board will bring sensations even in rough conditions. Acceleration and stable curves allow for a fast and fluid surfing, where the rider will be able to precisely time his maneuvers. For heavier riders this shape will keep responding to foot pressure without limits.

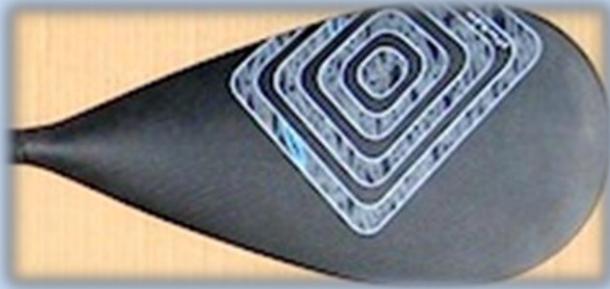

Length	Width	Thickness	Volume	Weight
9'3" (279cm)	30" (76cm)	4"1/2 (11.4cm)	133lt	9
Fin :	Thruster		3 x T12.8	

Shape specifics:

- **Outline:** compact and quite rounded for maximal maneuverability, but straightened on the nose and tail to get over the break and be more aggressive in the surfs.
- **Swallow tail:** this brings extra-maneuverability and volume under the rider's aft foot and allows thinner rails.
- **Rails:** thin, low volume, tucked under forward and rather sharp next to the tail: maneuverability, sharp surfs.
- **Scoop:** curved, to fit in the wave through and bring further safety in critical sections.
- **Bottom:** Veed, with a double concave, on the whole length, to straighten the scoop-line and bring more speed
